Introduction

Computer Aided Designing (CAD) is one of the popular fields in designing engineering projects and layouts with highest overall job-market demand. CAD designing is very important and very helpful for an individual as well as the employer all over the world. Moreover, an industry recognized credential such as CAD certification helps an individual excel in his/her career in designing — providing benefits to the individual and employer. Competency standards set by TVET provide reliable validation of skills and knowledge and can lead to accelerated professional development, improved productivity and enhanced credibility.

In order to keep pace with current developments and advancements in every walk of life particularly the industrial sector, there is dire need to strengthen and promote productive working relationship between the training provider and the industry so that it results in enhancing the quality of training delivery, enterprise competitiveness and access to decent employment. That's why existing NVQF for AutoCAD trade have been identified for review and further development of the missing levels, skills set and occupational competencies meeting the demands of the industry. Moreover, these qualifications have been developed in response to the demands of labour market and national priorities with the involvement of industry at key stages in the development process.

The core areas considered in the development of this qualification include competency standards, structure, level, time allocation in credit hours, tools and equipment as per National Vocational Qualification Framework (NVQF) Development Manual 1 using the competency based training and assessment (CBT&A) approach.

Purpose of the Qualification

The competency based NVQ has been developed to train the unskilled men of Pakistan on the technical and entrepreneurial skills so that they get employed / self-employed and inevitably set sustainable impact on their lives by increasing their monthly income.
